

Proyek 6: Implementasi IDS (Intrusion Detection System) dengan Snort / Suricata

Nama Kelompok :

- 2201020098 Muhammad Rifqi
- 2201020123 Handicap
- 2201020139 Muhammad Iqbal Hordani
- 2201020101 Irsyad Widiansyah

Tahapan 3: Simulasi port scanning dengan nmap

- Port Scanning

Port scanning adalah teknik untuk memeriksa port-port yang terbuka pada suatu host atau server.

Tujuan scanning ini adalah untuk:

- mengidentifikasi layanan (service) yang berjalan,
- mengetahui port mana yang terbuka atau tertutup,
- memetakan potensi celah keamanan pada sistem.

Dalam konteks keamanan jaringan, port scan merupakan aktivitas yang sering dilakukan oleh penyerang (attacker) untuk mengumpulkan informasi sebelum melakukan serangan lebih lanjut. Oleh karena itu, Intrusion Detection System (IDS) seperti Suricata harus mampu mendeteksi pola scanning tersebut.

- Nmap

Nmap adalah singkatan dari **Network Mapper**, yaitu alat pemindai jaringan berbasis **opensource** yang digunakan untuk menemukan perangkat, port terbuka, dan layanan yang berjalan dalam suatu jaringan komputer. Nmap berfungsi untuk eksplorasi jaringan dan audit keamanan, serta membantu dalam mengidentifikasi potensi kerentanan dalam sistem jaringan. Alat ini sangat populer di kalangan profesional keamanan informasi dan digunakan untuk berbagai tujuan, termasuk pemetaan jaringan dan pengujian penetrasi.

- Tujuan Simulasi

1. Menghasilkan aktivitas port scanning dari mesin attacker menggunakan Nmap
2. Memvalidasi apakah Suricata dapat mendeteksi pola scan tersebut
3. Menghasilkan log yang dapat dianalisis pada tahap selanjutnya

Dengan melakukan simulasi ini, mahasiswa dapat memahami bagaimana IDS mendeteksi pola scanning melalui rule bawaan Suricata.

- Membagi 2 mesin

1. **Mesin 1 = Attacker** (Memiliki Nmap dan akan melakukan scanning.)
2. **Mesin 2 = Victim** (Menjalankan Suricata dan menjadi target scanning.)

Catatan *

Progres Mesin 1 = Attacker menggunakan

1. Install Nmap

- choco install nmap -

```
Administrator: Windows PowerShell
Software install location not explicitly set, it could be in package or
default install location of installer.
Downloading package from source 'https://community.chocolatey.org/api/v2/'
Progress: Downloading KB3033929 1.0.5... 100%

KB3033929 v1.0.5 [Approved]
KB3033929 package files install completed. Performing other installation steps.
Skipping installation because update KB3033929 does not apply to this operating system ().
The install of KB3033929 was successful.
Software install location not explicitly set, it could be in package or
default install location of installer.
Downloading package from source 'https://community.chocolatey.org/api/v2/'
Progress: Downloading vcredist140 14.44.35211... 100%

vcredist140 v14.44.35211 [Approved] - Possibly broken
vcredist140 package files install completed. Performing other installation steps.
Runtime for architecture x86 version 14.44.35211 is already installed.
Runtime for architecture x64 version 14.44.35211 is already installed.
The install of vcredist140 was successful.
Software install location not explicitly set, it could be in package or
default install location of installer.
Downloading package from source 'https://community.chocolatey.org/api/v2/'
Progress: Downloading nmap 7.98.0... 100%

nmap v7.98.0 [Approved]
nmap package files install completed. Performing other installation steps.
Installing nmap...
nmap has been installed.
nmap may be able to be automatically uninstalled.
Environment Vars (like PATH) have changed. Close/reopen your shell to
see the changes (or in powershell/cmd.exe just type 'refreshenv').
The install of nmap was successful.
Deployed to 'C:\Program Files (x86)\Nmap'

Chocolatey installed 12/12 packages.
See the log for details (C:\ProgramData\chocolatey\logs\chocolatey.log).

Installed:
- autohotkey v2.0.19
- autohotkey.install v2.0.19
- chocolatey-compatibility.extension v1.0.0
- chocolatey-core.extension v1.4.0
- chocolatey-windowsupdate.extension v1.0.5
- KB2919355 v1.0.20160915
- KB2919442 v1.0.20160915
- KB2999226 v1.0.20181019
- KB3033929 v1.0.5
- KB3035131 v1.0.3
- nmap v7.98.0
- vcredist140 v14.44.35211
PS C:\WINDOWS\system32>
```

- cek instalasi Nmap : nmap -v

```
PS C:\Users\Handicap> nmap -v
Starting Nmap 7.98 ( https://nmap.org ) at 2025-12-04 12:55 +0700
Read data files from: C:\Program Files (x86)\Nmap
WARNING: No targets were specified, so 0 hosts scanned.
Nmap done: 0 IP addresses (0 hosts up) scanned in 0.23 seconds
Raw packets sent: 0 (0B) | Rcvd: 0 (0B)
```

2. Simulasi Port Scanning dengan Nmap, Ip target = 192.168.56.102

- Normal scan

Normal scan adalah metode scanning standar Nmap yang digunakan untuk memeriksa port mana saja yang terbuka pada target. Scan ini mengirimkan paket TCP ke beberapa port umum dan menampilkan status port seperti **open**, **closed**, atau **filtered**.

Perintah : nmap <IP_Target>

```
PS C:\Users\Handicap> nmap 192.168.56.102
Starting Nmap 7.98 ( https://nmap.org ) at 2025-12-04 13:58 +0700
Nmap scan report for 192.168.56.102 (192.168.56.102)
Host is up (0.0012s latency).
Not shown: 999 closed tcp ports (reset)
PORT      STATE SERVICE
22/tcp    open  ssh
MAC Address: 08:00:27:F3:C1:37 (Oracle VirtualBox virtual NIC)

Nmap done: 1 IP address (1 host up) scanned in 0.26 seconds
PS C:\Users\Handicap> |
```

Output :

- **Target IP:** 192.168.56.102
- **Host Status:** Up
- **Port Terbuka:**

- **22/tcp – SSH**
 - **MAC Address:** 08:00:27:F3:C1:37 (VirtualBox NIC)
 - **Jumlah Port Tertutup:** 999 port closed
 - **Waktu Scan:** ~0.26 detik

- SYN scan (Stealth Scan)

SYN scan adalah jenis scanning yang hanya mengirim paket **SYN** tanpa menyelesaikan proses handshake TCP. Teknik ini sering digunakan penyerang karena lebih cepat, lebih “diam-diam”, dan sering tidak tercatat oleh service target. IDS seperti Suricata biasanya mendeteksi scan ini sebagai aktivitas mencurigakan.

Perintah : sudo nmap -sS <IP_Target>

```

PS C:\Users\Handicap> nmap -sS 192.168.56.102
Starting Nmap 7.98 ( https://nmap.org ) at 2025-12-04 14:05 +0700
Nmap scan report for 192.168.56.102 (192.168.56.102)
Host is up (0.0017s latency).
Not shown: 999 closed tcp ports (reset)
PORT      STATE SERVICE
22/tcp    open  ssh
MAC Address: 08:00:27:F3:C1:37 (Oracle VirtualBox virtual NIC)

Nmap done: 1 IP address (1 host up) scanned in 0.23 seconds

```

Output :

- Target IP: 192.168.56.102
 - Host Status: Up
 - Port Terbuka:
 - 22/tcp – SSH
 - MAC Address: 08:00:27:F3:C1:37 (VirtualBox NIC)
 - Jumlah Port Tertutup: 999 port closed
 - Network Distance: 1 hop (VM lokal)
 - Waktu Scan: ~0.23 detik

 - Aggressive scan (-A Scan)
- Aggressive scan melakukan scanning yang lebih lengkap:
- mendeteksi versi service
 - identifikasi sistem operasi (OS detection)
 - melakukan traceroute
 - scanning port secara menyeluruh
- Metode ini menghasilkan traffic lebih banyak dan mudah terdeteksi oleh IDS.
- Perintah : sudo nmap -A <IP_Target>

```

PS C:\Users\Handicap> nmap -A 192.168.56.102
Starting Nmap 7.98 ( https://nmap.org ) at 2025-12-04 14:06 +0700
Nmap scan report for 192.168.56.102 (192.168.56.102)
Host is up (0.0013s latency).
Not shown: 999 closed tcp ports (reset)
PORT      STATE SERVICE VERSION
22/tcp    open  ssh      OpenSSH 9.6p1 Ubuntu 3ubuntu13.14 (Ubuntu Linux; protocol 2.0)
| ssh-hostkey:
|_ 256 c4:4c:c7:1d:ba:9c:c7:fb:d6:a4:2f:0e:85:08:06:9c (ECDSA)
|_ 256 f3:b9:a4:4c:bb:af:9d:97:0f:03:ae:21:69:e9:43:6f (ED25519)
MAC Address: 08:00:27:F3:C1:37 (Oracle VirtualBox virtual NIC)
Device type: general purpose|router
Running: Linux 4.X|5.X, MikroTik RouterOS 7.X
OS CPE: cpe:/o:linux:linux_kernel:4 cpe:/o:linux:linux_kernel:5 cpe:/o:mikrotik:routertos:7 cpe:/o:linux:linux_kernel:5.6
.OS details: Linux 4.15 - 5.19, OpenWrt 21.02 (Linux 5.4), MikroTik RouterOS 7.2 - 7.5 (Linux 5.6.3)
Network Distance: 1 hop
Service Info: OS: Linux; CPE: cpe:/o:linux:linux_kernel

TRACEROUTE
HOP RTT      ADDRESS
1  1.26 ms  192.168.56.102 (192.168.56.102)

OS and Service detection performed. Please report any incorrect results at https://nmap.org/submit/ .
Nmap done: 1 IP address (1 host up) scanned in 6.83 seconds
PS C:\Users\Handicap>

```

Output :

- Target IP: 192.168.56.102
- Host Status: Up
- Port Terbuka:
 - o 22/tcp – OpenSSH 9.6p1 (Ubuntu 3ubuntu13.14)
- SSH Host Key:
 - o Fingerprint ECDSA & ED25519 terdeteksi
- OS Detection:
 - o Teridentifikasi sebagai Linux (kernel 4.x – 5.x)
- Device Type:
 - o General purpose / router-like (VirtualBox VM)
- Network Distance: 1 hop (satu jaringan / host-only)
- Waktu Scan: ~6.83 detik

3. HASIL SCANNING OLEH MESIN 2 (IDS DENGAN SURICATA)

- Scanning dari server attacker Nmap 192.168.56.102 dan Nmap -Ss 192.168.56.102

```
ubuntu@ubuntuserver:~$ sudo tail -f /var/log/suricata/fast.log
12/04/2025-07:05:40.299555 [**] [1:1000003:1] ET SCAN Potential SYN Scan [**] [Classification: (null)] [Priority: 3] {TCP} 192.168.56.1:63473 -> 192.168.56.102:139
12/04/2025-07:05:54.379186 [**] [1:1000003:1] ET SCAN Potential SYN Scan [**] [Classification: (null)] [Priority: 3] {TCP} 192.168.56.1:62012 -> 192.168.56.102:554
```

Output:

- **Alert Terdeteksi:** ET SCAN Potential SYN Scan
- **Jenis Aktivitas:** Suricata mendeteksi percobaan **SYN Scan** (teknik yang digunakan oleh nmap -sS).
- **Sumber Trafik:**
- **192.168.56.1** (host Windows kamu) → **192.168.56.102** (server Ubuntu)
 - **Port Tujuan:** Port acak (139, 554, dan lainnya) karena proses scanning.
 - **Prioritas Alert:** 3 (Moderate)

- Scanning dari server attacker Nmap -A 192.168.56.102

```

```

Kesimpulan

Berdasarkan hasil pemindaian menggunakan **Nmap -sS** dan **Nmap -A** terhadap target **192.168.56.102**, Suricata berhasil mendeteksi seluruh aktivitas scanning yang dilakukan dari host **192.168.56.1**. Pada pemindaian **-sS**, Suricata mencatat alert **ET SCAN Potential SYN Scan**, yang menunjukkan bahwa IDS mampu mengenali pola stealth scan (SYN scan) secara efektif.

Sementara itu, pada pemindaian **-A** yang lebih agresif, Suricata mendeteksi aktivitas tambahan berupa **ET SCAN Nmap Scripting Engine Scan** dan **ET SCAN Nmap OS Detection Probe**, yang muncul akibat proses deteksi OS, pemeriksaan layanan, dan eksekusi Nmap Scripting Engine.

Secara keseluruhan, hasil ini menunjukkan bahwa Suricata berfungsi dengan baik sebagai IDS, karena berhasil mengidentifikasi perbedaan jenis scanning—baik yang bersifat stealth maupun agresif—and memberikan alert yang sesuai terhadap setiap pola serangan yang muncul.
